

Thursday 27 August — pocket card

Shen Ruililin only. Do not hand this sheet to Professor Bishai. First ten minutes = form 2a. Hogan does not sign this form.

Likelihood: endorsement-ready for the Laidlaw bar. Likely to sign if this stays a programme form. Do not say that he will sign. Do not wait for another Hogan review.

Say this, then stop

1. This is the HKU Laidlaw research-report form, due 31 August.
2. Please use the 24 August PDF, not an earlier file.
3. I need the supervisor block: rating, comments, signature. I left those blank. Optional paste is on the one-pager.
4. Poster is 15 September; no signature today.
5. Journal writing with Hogan is a separate file. I am not asking you to sign that.

If he asks (one line)

Hogan / manuscript	Journal live file. This form is the programme essay. Not waiting on another Hogan pass.
Finding?	No confirmatory claim. All twelve Model 1 $q > 0.19$.
Stroke / AMI	Stroke not delivered. Admission cause not recorded. Not principal-dx AMI.
Model 2 / 3	Specified, not fitted. No invented health coefficients.
Gate 3 / IRB	Gate 3 open. Signing the form does not freeze a headline. IRB is Roro's journal field.
Takes it away	Please by Friday 28 August.

Optional comments paste (his box, not yours)

I have examined the research report. Shen Ruililin completed a clear exploratory analysis of monthly CHD and HF first hospitalisations among people with diabetes or hypertension in Hong Kong, 2013–2023. Reported estimates are from Model 1 (twelve thermal comparisons); all q -values exceed 0.19. The report does not claim a confirmatory thermal effect, notes that admission cause was not recorded and that stroke data were not delivered, and is suitable for the Laidlaw Stage 3 research-report requirement. I rate the student's performance as satisfactory.
