

Week 2 Decisions & Drop-in — One Page

Bob Shen — Laidlaw / Bishai lab — 21 July 2026

No HA outcome results yet. Public layers are real; pathway dry-run is synthetic.

Status snapshot

Layer	Status	Note
HKO climate (132 mo)	Ready	Extremes, spells, 2D3N
C&SD denominators	Ready	Age-sex mid-year
EPD pollution	Ready (REAL)	Staged in P11
CHP flu	Ready (121/132)	P14 complete-case
Pathway panel	Dry-run OK (17)	P13 waits subtype
Stroke aggregates	Pending	Unlock inference

Gate 3 headline proposal

Primary pair: **P02** (same-month Tmax/Tmin) + **P04** (official extreme-day counts, per 5 days). Freeze only after real descriptives. Report remaining pathways as a labelled panel.

Drop-in command

```
PATHWAY_MODE=real Rscript scripts/run_pathway_pipeline.R
```

Place approved CSV in `data_raw/ha_secure_placeholder/`. Never commit microdata.

Still confirm

Item	Default	Owner
Outcome definition	Stroke aggregates (pooled)	Roro/Bob
Grain	Age×sex if present	On inspection
Subtype	Enable P13 only if IS/HS	On inspection
Governance	Follow PI path	Bishai
Holidays	Scaffold until gazette	Bob

Honesty rules

Monthly burden $\neq$ daily DLNM $\neq$ excess-death mortality. No AMI from files without admission reasons. Synthetic coefficients are plumbing only.
