

Monthly temperature panel, Hong Kong Observatory Headquarters, 2013–2023

Prepared 12 August 2026 by Shen Ruililin. Public climate only. No Hospital Authority columns.

This note accompanies the attached CSV. The join key is `month_id` (YYYY-MM), January 2013 through December 2023 (132 months). Station is Hong Kong Observatory Headquarters throughout. Daily flags use HKO climatological thresholds; the monthly counts are a roll-up of those flags, not a new HKO definition.

Columns

<code>month_id</code>	Calendar month
<code>mean_temp</code> , <code>mean_tmin</code> , <code>mean_tmax</code>	Monthly means of daily mean, minimum, and maximum temperature (°C)
<code>hot_nights</code>	Days with $T_{\min} \geq 28^{\circ}\text{C}$
<code>very_hot_days</code>	Days with $T_{\max} \geq 33^{\circ}\text{C}$
<code>extremely_hot_days</code>	Days with $T_{\max} \geq 35^{\circ}\text{C}$
<code>cold_days</code>	Days with $T_{\min} \leq 12^{\circ}\text{C}$
<code>days_in_2d3n_window</code>	Days belonging to a two consecutive very hot days with the three corresponding hot nights window
<code>station</code>	Always HKO in this file

Table 1. Monthly climate series, January 2013–December 2023 ($n = 132$ months)

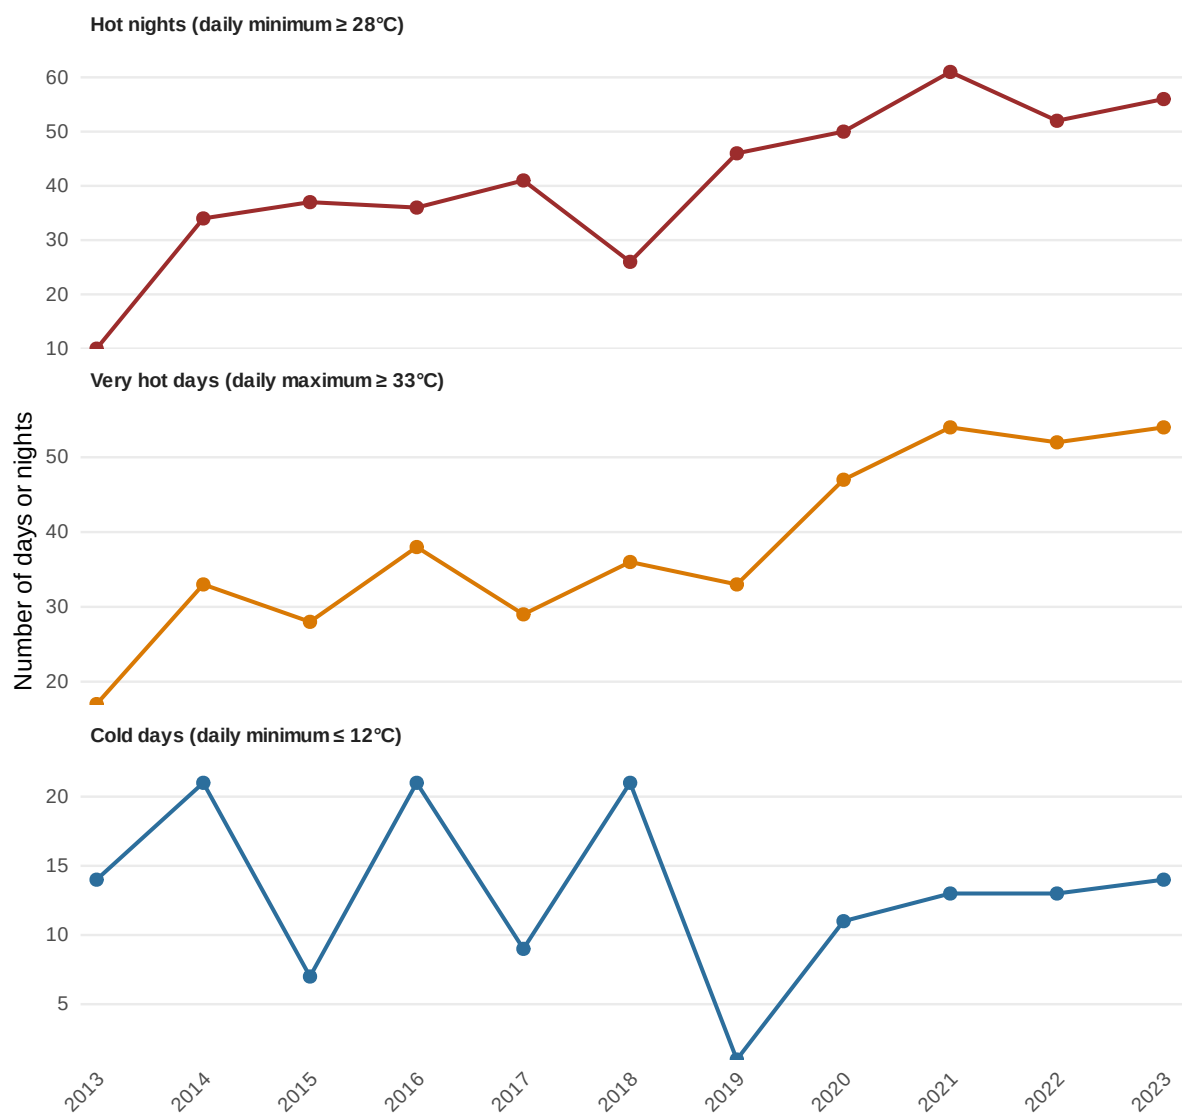

Series	Mean	SD	Min	Max	11-year total
Mean temperature (°C)	24.02	4.68	15.24	30.27	—
Mean $T_{\min}$ (°C)	22.10	4.67	13.35	28.35	—
Mean $T_{\max}$ (°C)	26.66	4.80	17.68	33.32	—
Hot nights (days/month)	3.40	5.38	0	25	449
Very hot days (days/month)	3.19	5.16	0	21	421
Cold days (days/month)	1.10	2.54	0	11	145
Extremely hot days (days/month)	0.31	1.09	0	10	41

Of 145 official cold days, 141 fell in December–February (December 40, January 54, February 47; March 4). After calendar month, remaining cold-day variation is between-year differences within winter.

Please do not append health counts to the CSV if you circulate it. Page 2 shows the same daily Headquarters series as annual totals, checked against HKO Year’s Weather summaries.

Annual thermal extremes in Hong Kong, 2013–2023

Counts derived from daily Hong Kong Observatory Headquarters observations using official temperature

Source: Hong Kong Observatory. These are environmental exposure descriptors, not cardiovascular or other health-outcome results.

Annual counts from the same Headquarters daily series. These are environmental descriptors, not hospitalisation results.
