

Official hot nights by year and month, Hong Kong Observatory Headquarters, 2013–2023

June–September recorded at least one official hot night in every year; July 2013 contained 1 night and July 2022 contained 25 nights.

Environmental provenance: REAL public Hong Kong Observatory Headquarters data; hot night = daily minimum temperature $\geq 28^{\circ}\text{C}$. v_{max} = 25 from this monthly file. ggplot twin of the Python Figure D SVG, sharing construction with Figure A. Identification: remaining variation after calendar-month indicators is intensity inside already-hot months. Not a health finding.
